

Active Seating

Variér® Move™

The designer Peter Opsvik, invented the Variér® Move™ after observing how workers made cobblestone streets. He saw that they were sitting on a one-footed stool.

Variér® Move™ is a supportive stool that encourages movement in a fun and unconventional way. When you're half-standing, (half-sitting) the Variér® Move™ provides you with the same advantages as the cobblestone workers stool did.

- Mystic Black Fabric & Natural wood base
- Scandinavian design
- Allows 360° movement
- Custom colours are available
- Ideal for sit/stand workstations
- 7 year limited warranty

Muvman Factory- Production & Assembly

One employee in two often or always has to stand when working. Standing when working is a strain and can even be painful. The musculoskeletal system is incorrectly loaded; the large groups of muscles are permanently tensed. The spine, ligaments, tendons and joints are subject to one-sided static loading. The consequences are disc problems, bad blood circulation, metabolic disorders, muscle stiffness and fatigue. A problem for employees and employers alike.

- Variable standing/sitting allows for longer and more productive work
- Simple and intuitive handling
- Strengthened core as a result of being in motion
- Significant international design awards give you peace of mind
- Extensive height adjustment range from 51cm to 84cm
- muvman HIGH (60cm to 93cm) is available for people over 185cm in height
- Three year limited warranty
- Stable baseplate with non-slip rim prevents accidental toppling & slipping

Active Seating

Swopper Classic - Changing The Way We Sit

Swopper is a well researched, German engineered ergonomic office stool. It's designed to assist the body's natural motion pattern, particularly when sitting, through its flexibility in 3 dimensions. All this strengthens your back, increases performance and helps to keep you fit and healthy.

Sitting on a moveable surface requires the active use of the legs and torso, and the Swopper makes sitting fun and ergonomic in many ways.

- Height & spring tension adjustments
- Lateral (side to side) adjustment
- Seat cover: Alcantara poly suede fabric
- Three (3) year limited warranty
- Weight limit: 131kgs (290lbs)
- Height range 45 - 68cm (22" to 27.5")

Swopper AIR

The new Swopper AIR use a new high tech 3DEA spacer fabric, also described as a three-dimensional textile, consisting of a top and bottom layer of performance fabric, held at a clearly defined distance by pressure-sensitive threads. The result bears resemblance to a textile sandwich that can be used as an elastic climate-comfort element in many objects or applications designed for sitting and reclined rest.

- Mesh material (net structure) made of 100% polyester
- 3DEA spacer fabric
- Optimum climate-control properties provided by natural
- Heat and moisture regulation
- Three (3) year limited warranty
- C
- Height range 45 - 68cm (22" to 27.5")

Active Seating

Swoppster - Sitting Better from the Beginning!

Conventional children's furniture greatly restricts children's natural room to move. This is why Aeris developed the swoppster - the active-dynamic seat for kindergarten and primary school children - with its unique 3D movement. This makes the seat adapt itself to the child and not vice versa!

The swoppster enables a constant change of posture and thus a constant alternation between loading and relieving of the complete musculoskeletal system. This constant rhythmic movement is decisive for muscular activity and stimuli to the brain.

- Encourages alertness, attentiveness and concentration
- Enables more movement than any other chair
- Prevents bad posture and strengthens the back
- Three (3) year limited warranty
- Weight limit: 50kgs
- Height range 32cm and 47.5cm
